

Old center: $R_Q = B_Q(v)$

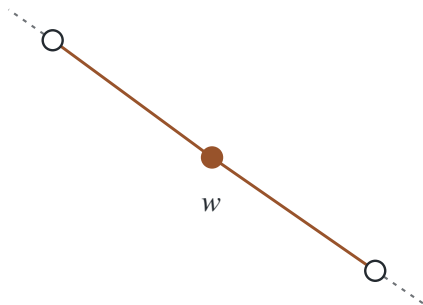

$$d_Q(v, u) \leq \lfloor \kappa m_Q(v) \rfloor$$

$\text{Star}_Q(R_Q)$ includes the outside endpoints.

Private contact: $R_Q = \{w\}$

w is private in this sheet

A private singleton removes no old vertex.

● removed R_Q

○ retained $D_Q = V(Q) \setminus R_Q$

— in $\text{Star}_Q(R_Q)$

Also allowed: $R_Q = \emptyset$. Both local incidence neighborhoods are forests.
