

Prefix tree and one rounding star

ordinary children

parking target

$$q_v = p_v^\circ + \sum_{i \text{ child of } v} q_i$$

Schematic: layout does not encode metric distances.

Current representatives

Same retained prefix v

$t-1$

t

$a_v(t-1)$

$a_v(t)$

The anchor may change while the tree vertex stays the same.

Retained-anchor travel is paid separately.
